PROFILE

- Data Analyst and M.Sc. Data Science graduate skilled in **SQL**, **BigQuery**, and **Python** for building reliable reporting tables, validation checks, and automated workflows. Experienced with KPI dashboards in **Power BI/Tableau**, operations analytics, and applied feature engineering for an OTIF risk / delay prediction prototype.

EDUCATION

- **University of Europe for Applied Sciences** Potsdam, Germany
M.Sc. Data Science *Sep 2023 – Aug 2025*
 - Focus: statistics, forecasting, data visualization, applied ML
 - **Thesis:** Extracted deep visual features from **1,416** microscopy images using pre-trained CNNs; explored structure using **t-SNE** and **UMAP**.
- **Visvesvaraya Technological University** Mysore, India
B.E. Computer Science *May 2019 – May 2023*
 - Core areas: programming, databases, software engineering

CORE SKILLS

- **SQL / analytics:** joins, CTEs, window functions, aggregations; validation queries, reconciliation, metric tables
- **Python:** pandas, NumPy, matplotlib; automation, API ingestion, feature tables, reproducible analysis
- **BI & reporting:** **Power BI**, **Tableau**; KPI dashboards, drill-down analysis, stakeholder reporting
- **Data platforms:** **BigQuery**; **SAP HANA** (used for querying/extracts); **Spark** (used)
- **Data pipelines:** incremental loads, scheduled workflows (**Airflow** familiarity), monitoring (**Grafana** familiarity), dbt (models/tests/docs)
- **ML (applied):** feature engineering, baseline model prototyping; **PyTorch** (CNN training/experiments)
- **Languages:** English (Fluent), German (A2)

EXPERIENCE

- **JSW Paint** Bangalore, India
Data Analyst Intern (Operations Analytics) *Jul 2022 – Jun 2023*
 - Tools: **SQL**, **BigQuery**, **Python**, **Power BI**, **Tableau**, **Excel**
 - Built standardized BigQuery reporting tables and KPI views to analyze performance by **product line**, **shift**, and **machine/line**, supporting weekly operations reviews.
 - Created reusable **SQL** models and reporting tables used across **10+** recurring reports, reducing transformation/cleaning effort by **~70%**.
 - Developed KPI dashboards used in weekly reviews by **8+** stakeholders to track trends, identify bottlenecks, and monitor progress vs targets.
 - **Feature engineering (POC):** built model-ready feature tables (rolling 7/30-day averages, lag features, event counts) to support an **OTIF risk / delay prediction** prototype.
 - Automated recurring reporting using **Python** + scheduled BigQuery queries, cutting manual effort by **~80%** (**~6 hrs/week** → **~1 hr/week**) and improving consistency.
- **Pentagon Space** Bangalore, India
Marketing & Data Intern *Mar 2022 – Jun 2022*
 - Tools: **GA4**, **Google Ads**, **Meta Ads Manager**, **Excel/Google Sheets**
 - Implemented **GA4** event/conversion tracking (UTMs + lead conversions) and validated tracking accuracy across **10** key events.
 - Supported Google Ads and Meta Ads execution and reporting; monitored weekly performance across **15** campaigns/ad sets.
 - Streamlined recurring reporting workflows, cutting turnaround time from **3 hours** to **50 minutes** per cycle.

SELECTED PROJECTS

- **GitHub API Data Exploration (Master's Mini Project)** *Python, REST API, JSON, BigQuery*
Pulled live GitHub public activity via the GitHub REST API, transformed nested JSON into analysis tables, and visualized trends (repo creation, commits/pushes, event types). Extended analysis using GH Archive public events in **BigQuery**.
GitHub
- **Deep Learning: Classifying Drones vs. Birds** *Python, PyTorch, CNNs, XAI*
Trained and compared CNN models in GPU-enabled environments; performed error analysis and used **Grad-CAM** to interpret predictions. *Publication: IRJET*. Paper link
